

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning on page 33, line 18 with the following amended paragraph:

In a further alternative, shown in FIG. 9, a locator member 214 may be provided that includes splines 264 that may be selectively expanded to different angles. A locator actuator (not shown) may allow controlled expansion of the splines 264a, 264b to desired angles with respect to the longitudinal axis 213 of the locator member. For example, a cable or other control wire (not shown) may be ~~extend~~ extended from the locator actuator to each of the splines 264a, 264b, e.g., through a lumen (not shown) in the locator body 232. Each cable may be directed axially to selectively expand or collapse the spline 264a, 264b connected to the respective cable.
